DOES IT WORK?

Proof of Concept: Efficiency

Design Consistency: ?

The colors represent bidders and not whether a package is involved.

A	B	C	D	E	F
G	H	I	J	K	L

← first best 100% efficiency

← Actual outcome at 98% efficiency. The inefficiency is due to misallocations of the second six items, which are of low value. Only I and K are in the wrong hands.

SUBMISSION RULES

- A. Every bid must meet an increment requirement.
- B. Outstanding bids must meet two eligibility constraints based on individual item weights (bidding units).
 - 1. Package bids place computational burdens on the system. Encourage only the most "important". Weighted sum of package bids must be less than or equal to eligibility. Weight of a package is sum of weights of items in package.
 - 2. Total exposure of bids cannot exceed eligibility.
- C. Eligibility of a round is determined by the activity of previous rounds.
 - 1. $E(t+1) = \lambda \min\{E(t), \text{Round activity (t)}\}$
 - 2. Round activity (t) = Max{sealed activity, continuous activity}
 - 3. Activity is attributed differently according to the aggressiveness of the bid:
 - High enough to be provisionally winning
 - High enough to be above the maximum on singles
 - At or below the maximum of the singles (get nothing)
