

**WEB APPENDIX TO SECTION III: OVERALL MOBILE
WIRELESS INDUSTRY METRICS**

3G+ COVERAGE

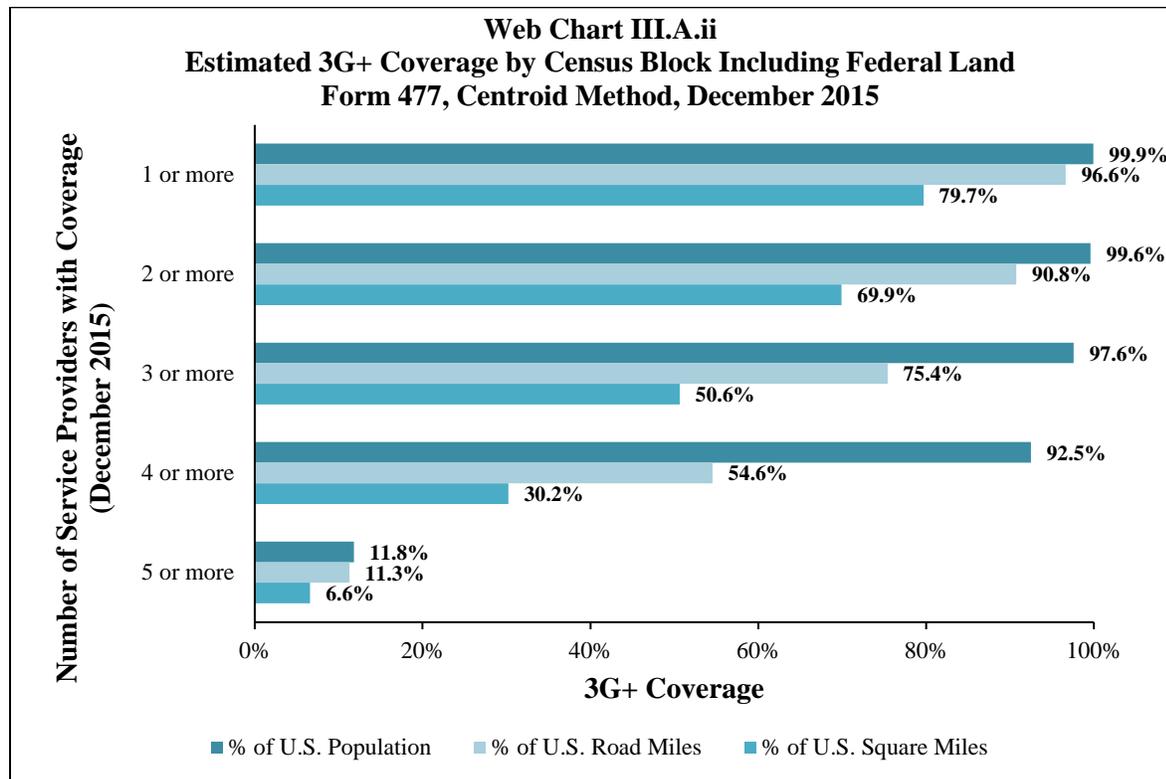

Source: Based on centroid analysis of January 2016 Mosaik and 2010 Census data. It is important to note that the number of service providers in a census block represent network coverage only. Network coverage does not necessarily reflect the number of service providers from which any particular individual or household in a given area may choose. These coverage calculations, while useful for measuring developments in mobile coverage, have certain limitations that likely result in an overstatement of the extent of mobile coverage. The 3G/4G technologies included are the following: EVDO, EVDO Rev A, WCDMA/HSPA, HSPA+, LTE, and mobile WiMAX.

These coverage calculations, while useful for measuring developments in mobile coverage, have certain limitations that likely result in an overstatement of the extent of mobile coverage.

Estimated LTE Coverage by Census Block Excluding Federal Land
Form 477, Actual Area Coverage Method, December 2015

# of Providers with Coverage in a Block	Covered POPs	% of Total US POPs	Covered Square Miles	% of Total US Square Miles	Covered Road Miles	% of Total US Road Miles
<i>US Total (actual)</i>	307,208,956	100.0%	2,441,456	100.0%	5,890,295	100.0%
1 or more	305,970,336	99.6%	2,077,268	85.1%	5,603,895	95.1%
2 or more	303,355,264	98.7%	1,754,465	71.9%	5,100,022	86.6%
3 or more	294,879,424	96.0%	1,293,245	53.0%	4,215,587	71.6%
4 or more	274,175,648	89.2%	772,980	31.7%	2,999,743	50.9%
5 or more	25,254,366	8.2%	124,676	5.1%	447,559	7.6%

Source: Based on actual area coverage analysis of December 2015 Form 477 and 2010 Census data. Unlike the Centroid methodology where each block is either covered or not, the actual area methodology acknowledges many blocks are only partially covered. As it is unclear which of these blocks should be considered covered or not, we decline from reporting the number of blocks covered in these results.
